### EDITORIALS

**Can changes in the plasma lipidome help explain the cardiovascular benefits of the Mediterranean diet?**
A Bajaj and DJ Rader
See corresponding article on page 973.

**Tackling iron deficiency in infants: galacto-oligosaccharides may be up to the task.**
F Wang
See corresponding article on page 1020.

**Closer to clarity on the effect of lipid consumption on fat-soluble vitamin and carotenoid absorption: do we need to close in further?**
NE Moran and EJ Johnson
See corresponding article on page 1041.

**Supplementing a normal diet with protein yields a moderate improvement in the robust gains in muscle mass and strength induced by resistance training in older individuals.**
L Holm and NB Nordsborg
See corresponding article on page 1078.

### ORIGINAL RESEARCH COMMUNICATIONS

**Cardiovascular disease risk**
Plasma lipidomic profiles and cardiovascular events in a randomized intervention trial with the Mediterranean diet.
E Toledo et al
See corresponding editorial on page 965.

**Nutritional status, dietary intake, and body composition**
Dynamics of intrapericardial and extrapericardial fat tissues during long-term, dietary-induced, moderate weight loss.
G Talhaei et al
See corresponding editorial on page 965.

**Energy and protein metabolism**
Quantitative source of dietary protein influence metabolite production by gut microbiota and rectal mucosa gene expression: a randomized, parallel, double-blinded trial in overweight human.
M Beaumont et al
See corresponding editorial on page 965.

**Vitamins, minerals, and phytochemicals**
Consumption of galacto-oligosaccharides increases iron absorption from a micronutrient powder containing ferrous fumarate and sodium iron EDTA: a stable-isotope study in Kenyan infants.
D Paganini et al
See corresponding editorial on page 967.

**Nutritional epidemiology and public health**
Vitamin D prenatal programming of childhood metabolomics profiles at age 3 y.
B Qin et al
See corresponding editorial on page 971.

**Soya, maize, and sorghum–based ready-to-use therapeutic food with amino acid is as efficacious as the standard milk and peanut paste-based formulation for the treatment of severe acute malnutrition in children: a noninferiority individually randomized controlled efficacy clinical trial in Malawi.**
P Bahwere et al
See corresponding editorial on page 971.

**Temporal eating patterns: associations with nutrient intakes, diet quality, and measures of adiposity.**
RM Leech et al
See corresponding editorial on page 971.

**Gene-nutrient interactions**
A Dossouah et al
See corresponding editorial on page 971.
