Information for Authors
THE AMERICAN JOURNAL OF CLINICAL NUTRITION

Revised July 1973

The Editors of The American Journal of Clinical Nutrition welcome concise articles on new findings in the field of nutrition. Scientific papers of completed original research are preferred and will be given early publication. Invited papers, editorials, and Perspectives in Nutrition will be utilized as space permits.

Manuscripts and books for review should be sent directly to the Editor, Milton E. Rubini, M.D., Memorial Hospital of Southern California, 3828 Hughes Avenue, Culver City, California 90230.

As is customary in professional publications, statements in articles are the responsibility of the authors. Articles must be contributed solely to The American Journal of Clinical Nutrition; material is copyrighted and may not be reproduced without permission of the Executive Editor at 9650 Rockville Pike, Bethesda, Maryland 20014.

Preparation of manuscripts

Authors are requested to follow these instructions carefully in preparing manuscripts: Please double space all material, including tables and references, using wide margins; type on one side of the sheet only; make a carbon copy for yourself and send the original and two carbon or Xerox copies to the Editor; include full name, schools, degrees, staff position, and affiliation. Use superscript numerals for footnotes, and type footnotes on a separate page.

List bibliographic references numerically and in serial order as referred to in the article. Place the reference numbers in the text between parentheses, as (5). Please make certain each reference contains name of author with initials; title of article; name of periodical, with volume, page, and year. For example: PAIGE, D. M., T. M. BAYLESS AND G. G. GRAHAM. Pregnancy and lactose intolerance. Am. J. Clin. Nutr. 26: 238, 1973. For titles of journals, follow the abbreviations given in the Chemical Abstracts "List of Periodicals," 1961 and supplements. In references to book titles, the following should appear in sequence: name of author(s), title, place of publication, publisher's name, year of publication, and page number. Example: SIEGEL, S. Nonparametric Statistics for the Behavioral Sciences. New York: McGraw-Hill, 1956, p. 83. Authors must be responsible for the accuracy and completeness of their references as these will not be rechecked by the Editors.

Unpublished work should not be included in the list of references unless the paper has been accepted for publication. It may be recognized by such parenthetical credits as "(unpublished observations)" or "(personal communication)" in the text.

Abstract. An abstract should accompany each manuscript. For a brief communication, include a 100-word abstract, for an original communication a 200-word abstract. The abstract should be an abbreviated, accurate representation of the article. It should be written in a single paragraph, double-spaced, using complete, connected sentences, active verbs, and the third person.
Preparation of illustrations

So that your article will be presented most effectively, illustrations must be glossy prints or professional drawings in black ink (never in blue; it will not produce well). All printing on illustrations should be done professionally and be large enough to be legible if reduction is necessary. Reference to all illustrations should be inserted in the text in consecutive order. Please follow these identification instructions: With a soft pencil write the figure number and the author's name on the back of each illustration and indicate the top. Do not use paper clips on glossy prints. Type legends for illustrations double-spaced on a separate sheet with numbers corresponding to those on the photographs or drawings. Please do not attach legends to the pictures.

Charges to authors

Excess illustrative material. Authors are encouraged to limit illustrations and tables to the necessary minimum for lucid and precise presentation. The cost of material in excess of 1½ Journal pages for figures, tables, and legends will be charged to the author. Special arrangements must be made in advance with the publishers for any reproduction in color.

Reprints. Orders for reprints should be sent on the form the author receives with galley proof. The cost of the first 100 reprints will cover a portion of the publication costs of the Journal. For detailed information see the announcements in issues of the Journal (November and December 1971, or January 1972).

Every author should make sure he has funds available for all charges on his article. Since these charges will be computed by the publisher from bills submitted by the printer, it might be several months after publication before an author receives his bill.

Correcting proof

Two sets of galley proofs and one set of engravor's proofs together with the original manuscript are sent to the author. Galleys should be carefully checked and any necessary changes or printer's errors (to be marked in red) should be clearly indicated in the margins. Except for correction of typographic errors, the cost of author alterations of subject matter in type will be charged to authors if these charges exceed the Journal's allowance of $10. Authors should consider this when financial arrangements are made with their institutions for payment. Proof should be returned to the Redactory Service, The American Journal of Clinical Nutrition, 9650 Rockville Pike, Bethesda, Maryland 20014.

Auxiliary publication

Additional detailed tables, appendixes, mathematical derivations, extra figures, and other supplementary matter too costly to be included in the Journal article may be submitted for deposition without charge with the National Auxiliary Publications Service of the American Society for Information Science. Material is deposited by the Editor with the consent of the author, and a footnote is carried in the published article to the effect that photostat or microfilm copies are available at moderate cost.

CONTENTS

letters to the editor

785  Factors affecting studies with chemically defined diets.  M. Winitz
789  Reply to Dr. Winitz.  H. R. Attebery, V. L. Sutter and S. M. Finegold
790  Zinc as an unrecognized limiting nutrient.  H. H. Sandstead
791  Reply to Dr. Sandstead.  R. P. Abernathy and S. J. Ritchey
792  A medical course in human nutrition: additional comments.  S. Sherr

brief communications

793  Plasma and urine ribonuclease as a measure of nutritional status in children
     D. M. Sigulem, J. A. Brasel, E. G. Velasco, P. Rosso and M. Winick
798  Intensification of hypertriglyceridemia by either alcohol or carbohydrate
     M. M. Fry, A. A. Spector, S. L. Connor and W. E. Connor

original communications

803  Effects of dietary supplementation of monosodium glutamate on infant monkeys,
     weanling rats, and suckling mice.  C.-P. Wen, K. C. Hayes and S. N. Gershoff
614  Subcellular localization of acetoacetyl-CoA deacylase and its role in acetoacetate
     synthesis.  R. E. Burch and A. R. Wertheim
823  Metabolic consequences of feeding frequency in man.  P. S. Wadhwa,
     Sr.  E. A. Young, K. Schmidt, C. E. Elson and D. J. Pringle
831  Distribution of ethanol in the human gastrointestinal tract.  C. H. Halsted,
     E. A. Robles and E. Mezey
835  Influence of a viral enteric infection on the aminogram and pathology of protein-
     calorie malnutrition in the pig.  T. Isoun, C. K. Whitehair and W. G. Bergen
845  Follow-up of obese patients: 14 years after a successful reducing diet.  E. Sohar
     and E. Sneh
