The definitive single volume work on current nutrition knowledge. Completely revised and updated with the latest research findings in newer areas such as essential fatty acids and prostaglandins, choline, chromium and iodine — and their clinical applications in infancy, pregnancy, longevity, nutrient and drug interactions and neoplasia. Expanded to more than 800 pages, with 58 chapters by the most respected authorities in the field. An indispensable reference for nutritionists, physicians, dietitians, teachers and students.

**WHAT THEY SAID ABOUT THE FOURTH EDITION:**

"Should prove ideal as supplementary reading for students and as a review of nutrition knowledge ... for physicians."  
JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION.

"... A valuable reference.... Strongly recommended for the personal reference libraries of dietitians and nutritionists, whether engaged in research or in applied fields. It should be available in all medical and university libraries."  
JOURNAL OF THE AMERICAN DIETETIC ASSOCIATION.
